

Life advancement:

Quentin Thomas has been faced with adversity his entire life. You see, Quentin lost his parents when he was a baby, lost his sight at a young age and was victim of an arson attack. However, Quentin and his family never lost hope and sought an organization that would provide a nourishing and enriching environment, all while preparing him for his greatest adventure —life.

How we helped

Quentin started attending Clovernook's Youth Discovery Program in 2006. Through the years, one particular camp piqued Quentin's interest and captivated his attention—Technology Camp. He learned how to utilize adaptive software, send and receive e-mails and download digital talking books, all taught by Clovernook's technology specialist, Larry Klug.

By attending Technology Camp and participating in Clovernook's Youth Discovery Program, Quentin has built a strong foundation which has given him the tools he will need in order to continue his education if he chooses and to find competitive employment when he is ready to enter the job force.

How it works

Clovernook understands that the skills we need to become successful, self-confident adults start developing at an early age. The Youth Discovery Program is designed to help each child with a visual impairment to develop his or her full potential by offering a variety of learning and social opportunities that are focused on his or her specific challenges.

We need your help

According to the American Community Survey (ACS), there are approximately 506,044 children with vision difficulty in the U.S., approximately 241,826 girls and 264,218 boys under the age of 18. These children are our future leaders, caregivers and business men and women. By giving them the tools that they need now, we will set them up for success in the future.

“Clovernook has provided me with unique and personalized services, helping me return to retail or service industry employment.”
—Nikki Campbell, age 24 and mother of two.
